Profile

AI & Machine Learning Engineer pursuing B.Tech in Computer Science (AI), with experience building end-to-end ML systems in financial intelligence, fraud detection, and computer vision. Skilled in data pipelines, feature engineering, predictive modeling, and real-time AI applications using Python, PyTorch, Scikit-Learn, XGBoost, FastAPI, and SQL. Passionate about developing scalable, data-driven solutions that transform complex data into actionable intelligence. Founder of Dimension, a tech initiative exploring AI-integrated drone systems.

Education

KCC Institute of Technology and Management

2023 – 2027

B.Tech in Computer Science and Engineering (AI)

Greater Noida, Uttar Pradesh

JVM Shyamali Ranchi

2022

12th CBSE Board – 85%

Ranchi

DAV Kapildev Public School, Ranchi

2020

10th CBSE Board – 90%

Ranchi

Technical Skills

Programming: Python, SQL, JavaScript, C++

Machine Learning & AI: Scikit-Learn, PyTorch, TensorFlow, XGBoost, Graph Neural Networks (GNNs), Graph Attention Networks (GATs), Computer Vision, Feature Engineering, pipeline engineering, Model Evaluation

Data Science & Analytics: Pandas, NumPy, Matplotlib, Seaborn, Data Preprocessing, Data Validation, Statistical Analysis

Projects

AlphaNexus AI - Financial Intelligence Platform | *Python, Pandas, NumPy, Scikit-Learn, XGBoost, SQL, FastAPI*

- Built scalable data pipelines to collect, clean, validate, and transform structured financial datasets from multiple sources and ingest it to ML model.
- Developed and evaluated predictive models using Scikit-Learn and XGBoost, applying cross-validation, hyperparameter tuning, and performance monitoring
- Implemented REST APIs using FastAPI to serve real-time ML predictions and analytical insights

Real-Time Fraud Detection System | *Graph Attention Networks, PyTorch Geometric, FastAPI, SHAP*

- Built an end-to-end fraud detection pipeline using a 2-layer Graph Attention Network (GAT) on a heterogeneous transaction graph (accounts → transactions → merchants → devices), achieving AUC-PR > 0.88
- Engineered 30+ behavioral features (velocity counts, time-of-day encoding, geo-distance, merchant category embeddings) and implemented focal loss training to handle a 0.1% fraud class imbalance - outperforming XGBoost baseline by 8+ points on AUC-PR

AI-Powered Rescue Drone Intelligence System | *Python, YOLOv8, OpenCV, NumPy*

- Developed a real-time computer vision pipeline using YOLOv8 and OpenCV to detect and track people and vehicles from live video streams, achieving 30+ FPS inference performance.
- Built an interactive drone HUD that overlays object confidence scores, telemetry metrics, distance estimation, and threat-prioritization indicators for enhanced situational awareness during search-and-rescue operations.

Achievements

State Level Champions – Drone Aeronautics Competition

January 2025

Held by Dr. A. P. J. Abdul Kalam Technical University

Conducted National Level Hackathon – at MICROSOFT AZURE

May 2025

Conducted Hackamania hackathon, organized by THEELITES
